ACE AND CROFT LILIES OF OUR "LOT 22 L"

They are grown with perfect isolation. This is always good insurance against mosaic virus infections. This Lot has little scale tip rot and produces high crowned bulbs. Vaughan's insist on definite weights per case to insure plenty of substance in bulbs. This is necessary to get good bud averages. All our Lily bulbs are from selected fields, inspected twice, with final inspection for grade and quality before shipping.

Vaughan's BOOK FOR FLORISTS Autumn 1951

601 W. JACKSON BLVD., CHICAGO 6—47 BARCLAY ST., NEW YORK 7

Is this True or False?

"All Dutch Bulbs are Alike"

Answer: FALSE! Just as in this country there are growers who produce "run of the mill" products, and super growers, who grow quality products because they excel in experience, skill, equipment and integrity. Vaughan's Seed Company buyers for 75 years have been searching the world for these super-growers. During all this time except when war interrupted we have imported bulbs from Holland; and every bulb we have bought has passed our special test of quality. Growers in Holland who wished to sell to Vaughan have long understood that to hold our business they must ship us only:

"THE CREAM OF THE CROP"

Long before the Dutch government set up its bulb controls, Vaughan specifications were being met by the highly selective list of Dutch bulb growers who ship to Vaughan. Only a small proportion of bulbs which pass official tests, can meet our specifications. Don't be deceived when you are told that all bulbs which pass the official test are of equal quality. Your common sense will tell this cannot be true.

For top quality flowers, grow Vaughan quality Dutch Bulbs, "the cream of the crop."

WE PAY

} **Duties
Freight (to Chicago)

Packing**

And all the other extra costs, impossible to estimate accurately in advance, which you incur when you import bulbs direct.

Place your bulb order with us, at the fixed prices quoted in this catalogue; they cover everything except freight from our warehouse to you. You get the benefit of quantity operations, since we are one of the largest importers of bulbs for florists.

All orders for Holland Bulbs placed with us before July 1st at open prices will receive a special Import Rate.

Double Your Money on Tulips Sold from this Attractive Display

MERCHANDISING bulbs belongs to the florist, who can supply expert advice to purchasers. Profits are large; there is no spoilage; and the business harmonizes with the florist's line, an important point. Our beautiful display box will be an ornament in any flower shop.

Vaughan's ten-compartment display box, staunchly made of 100 point cardboard printed in brilliant colors, will hold 500 bulbs, 50 each of ten varieties.

This beautiful display box, with 500 Top Size May-flowering tulips, 50 each of ten named varieties, separately bagged, \$23.00

We use TOP SIZE BULBS, the size which sells best over the counter. The 10 named varieties (50 each) of good named varieties. The price to you is \$23.00 for the box and 500 bulbs of 10 named varieties. You retail them for \$1.15 a dozen, or more, because the selection is worth more, doubling your money. Each variety is packed 50 in a bag labeled with its name. You empty one bag into a compartment, and refill in the same manner when it is empty. This prevents mixtures and loss of bulbs. After the display box and first collection have been bought, refill orders will be accepted for \$22.50 for 500 bulbs, 50 each of 10 varieties, in bags of 50; or \$44.00 for 1,000 bulbs, 100 each of ten varieties. Colored pictures are provided to paste on the compartments. This box keeps the bulbs in the open air, thus preventing bacterial rot which comes when they are sealed in cartons. The named varieties are kept apart without mixing, which adds greatly to their value. Varieties Subject to Change Without Notice.

Tulip Display Box Holding 500 Bulbs, 50 each of 10 Named Varieties

Counter Space Needed, 13x29 Inches.

The display box with its garden design printed in brilliant colors, occupies very little space on your counter. It is an ornament to any store. It solves the problem of offering bulbs for sale in the retail shop, without danger of mixing varieties, and losing stock.

BUYERS: Give this Check List the "Once Over" When Ordering

This is a list of items most commonly used and needed by Greenhouse operators during the catalog months of the year. A glance at the list will probably recall any needs you might have forgotten which would inconvenience you later. It will also be a suggestion aid as to the possibilities of filling any empty benches. Included are a few hints regarding varieties, time of blooming, and culture. All items are listed in our "Books for Florists," but this will give you a quick check for busy months. We are planning to print improvements on this in each book if it is of any value to you. We would appreciate hearing your ideas. Better keep this for reference until the next issue.

Forcing Fall Bulbs

Success in forcing tulips, narcissi, hyacinths, and iris in greenhouses and cold frames is largely dependent upon temperature control. All the factors which influence healthy growth are discussed in the following digest. It combines the basic principles originally established by scientific investigation in Holland, with the results of long experience in producing and forcing tulips under conditions prevailing in the United States. Every florist who attempts to grow these bulbs in a greenhouse or cold frame should be familiar with the facts which follow.

PRINCIPLES OF GROWTH ON TULIPS AND NARCISSUS

In forcing bulbs exact temperature control must be maintained for optimum results. Following are some of the growing principles that must be followed to get consistently good results from year to year.

When you receive bulbs from us, initiation of their flower buds is complete, and the floral parts may be examined by cutting a few bulbs horizontally with a knife and examining with a microscope. All the parts of the flower should be visible including petals, stamens and pistil. To find the flower bud, start cutting the bulb in the center and gradually work down by small segments in layers. The leaves will surround the flower, and will be cut first, and should not be confused with the flower part. Most varieties respond best to 68° F until the bud has been initiated in the bulb. After bud initiation 48° F is the proper storage temperature.

Precooling is the procedure of controlling the temperature so that the leaves, stem and flower bud elongate most rapidly in proper balance with one another. Most varieties respond best at 48° F for the elongation period. Vaughan's pre-cooled bulbs have been given the optimum elongation temperature, as soon as possible after bud initiation has been complete, so that the best and earliest blooms possible can be obtained.

PROCEDURE FOR GROWER TO FOLLOW

Upon receiving either pre-cooled or regular Tulip bulbs, plant them at once and grow them as close to 48° F temperature as possible until the shoots are about 2 to 3 inches high. When the plants are at least 2 to 3 inches high they may be moved to the greenhouse bench at listed dates for each variety. When the shoots start to emerge, it is wise to spray all flats or pots with a solution of ferimate made in the proportion of 1 pound of ferimate to 100 gallons of water with 4 ounces of Grasselli S. S. 3 combined spreader and sticker. This spray will control and prevent the spread of fungous diseases including Botrytis, or tulip "Fire". A dust of 50% sulfur and 50% limestone can also be used with good results particularly as a preventive. This dust should be applied freely after each watering until the flats or pots are removed to the growing bench.

Spotting of Tulip or Botrytis often occurs in late spring when the atmosphere in the greenhouses is very damp. Ventilate fully in order to avoid high temperatures and excessive moisture. Water very carefully and **never over the tops of the plants.**

Tulip bulbs can never be "forced" without taking unnecessary chances of white tip, bud blast or soft, poor quality bloom. If the temperature control has been followed as above, the best and earliest bloom will result without growing at above 60° F. Only certain varieties respond favorably to pre-cooling and early forcing, and poor results will be obtained if late varieties are put in the growing bench too soon. Bulb seasons vary as to their early forcing qualities, and it is necessary to play a little on the late side by a week or so rather than risk the entire crop. 60° F means Day and Night temperatures, and we recommend growing the first two weeks in the bench at 55° F. We have seen bulbs grown at 60° F come perfectly one week after those grown at 67° F had white tip and blasted buds. We recommend the following varieties for early bloom in order of benching and earliness. Single Early and Mendel tulips come into bloom early but their substance generally does not come up to Cottage or Darwins. Approximate dates follow.

Golden Harvest	December 21	February 1
Red Pitt	January 1	February 10
Rose Copeland	December 21	February 1

Varieties may be held for later blooming by continuing the growing at 48° F until the plants are almost ready to bloom in storage or by growing cooler than 60° F on the bench. Tulips should be planted in well drained soil, and not over watered or under watered. They will need more frequent waterings on the bench than in storage. Any well balanced fertilizer improves the color of foliage and flowers, but do not use an overdose.

If it is impossible to plant bulbs at once on their arrival, at least unpack and store them as close to 48° F as possible. Nothing will spoil them faster than temperatures above 70° F.

If you are going to grow them in a cold frame, pick a site with good drainage and water with cold water thoroughly before placing the flats or pots. A shady spot is preferable so that the sun does not keep the soil temperature high during possible warm Fall days. Cover the flats or pots with 3 or 4 inches of sand so that sprouts will not be broken easily when the time comes for moving into the greenhouse. Where winters are severe, put on a heavy layer of leaves or straw just before hard freezes are apt to come in your temperature zone. Spray the tops of pots or flats with Ferimate mixture or dust with sulfur mixture on bringing into the greenhouse. Grow day and night at 60° F or below; or 55° F at night and 63° F during the day. Generally speaking tulips grown in storage that is too cold will grow too short with large flowers; if grown in storage that is too warm the flowers will be small on thin, weak stems. Extreme heat in the greenhouses, any temperature from 67° F and up, may cause buds to blast or flower tips to turn white, and have poor color. If the plants become dry at any stage of growth bud blast will result.

We strongly recommend treating all tulip bulbs before planting by dusting with Spergon at the approximate rate of 1 lb. for each 3000 bulbs. Spergon is obtainable in units of 1 oz., 1 lb., 10 lbs. and 100 lbs. This treatment results in giving more even growth of plants by better rooting conditions.

Do not use Cuprioleed flats. It definitely hurts tulip rooting.

IRIS

Wedgewood bulbs handled by us have had the proper curing at increased temperature levels right after harvest. This treatment makes the bulbs bloom 2 to 3 weeks earlier than normal. While pre-cooling in addition makes them bloom 6 weeks earlier than normal.

Example normal dry stored bulbs held at 65 to 75° until 11/20 were pre-cooled at 48° 6 weeks until 1/2. They bloom in 1½ months from planting date using 10 ctm bulbs. About two weeks longer for 8-9 ctm bulbs. Pre-cooling late in season just before planting starting in Nov. or Dec. four weeks at 48° gives best stems.

Iris can be planted as late as December 15th with good results.

Iris bulbs do not have the flower buds initiated until the plant is approximately 2½ inches high in growth and large sizes only may be used for early flowering. Upon receipt of Iris Wedgewood 10 ctm. and up you should plant them and grow at 55° F, not higher, in the bench or in storage; 48° F would be acceptable but delays growth about one week. After the plants are 2½ inches high they should be definitely moved to the greenhouse and the day or night temperature should never be allowed to go above 60° F. Iris need lots of water and can not withstand dry soil conditions. Plant the bulbs shallow in deep flats. Late varieties or small sized Iris bulbs should be grown more slowly at about 45° to 50° F until about two weeks before blooming time when the temperature may be raised to 60° F days and 55° F nights. Plant Iris in deep flats so the roots have plenty of room, and the plants require good light conditions. Foliage may be trimmed as necessary to allow more light and decrease evaporation and drying out of flats, benches or pots.

NARCISSUS KING ALFRED

Trials at U.S.D.A. Belteville proved one weeks delay in planting precooled K. A. where bulbs were in cases at room temperature delayed bloom 3 weeks and made very uneven growth.

Plant all Narcissus bulbs as soon as received. Bulbs should be grown at 48° F until the shoots are 2 to 3 inches long at least. It does not hurt them to be left in much longer. Precooled King Alfred may be put on the bench as soon as they are 3 inches long. Grow at 60° F for three weeks and finish at 65° F. Narcissi like well drained soil, but water when heavy foliage growth is in crop. November 28 should be about the proper date to set precooled stock on the bench from the bulb cellar or cold frame. Regular stock of King Alfred should follow 2 to 3 weeks later, continuing with other varieties as their foliage indicates on forcing types.

We recommend treating all hardy Narcissus such as King Alfred and especially the Bicolors, by dusting Tersan or Arasan on the bulbs at approximate rate of 1 lb. per 2500 bulbs for the prevention of basal rot in Narcissus, and for more even plant growth. Tersan or Arasan is obtainable in units of 8 oz., 4 lbs., 25 lbs. and 100 lbs.

HYACINTHS

Unpack Hyacinths in trays at once and store dry in well-ventilated place—55° F is best.

For February flowering store at 60°-65° F and bulbs should not be planted until middle of October.

For later plantings up to January bulbs should be stored in trays in a dry warm place at a temperature of 70° but not higher.

Hyacinths if not planted immediately should be stored at 70° F in a dry place. Delayed planting is permissible for getting quality blooms late. Grow at 50° F in storage until the flower bud is entirely out of bulb at which time transfer to greenhouse for growing on gradually, increasing the temperature up to 70° F over a period of two weeks.

BULB CULTURE SUMMARIZED

The principal points for success with bulb stock of Tulips, Iris and Narcissus are:

1. Order and plant Tulips and Narcissus on time from September 1 to October 15. Best results out doors are obtained from these planting dates also.
2. Use moist soil in planting bulbs, and plant shallow so there is plenty of food and room for the roots. Water well after planting.
3. After unpacking as soon as received, store bulbs as close to 48° F as possible. Bulbs give off heat; in closed containers this can be serious.
4. Plant as soon as possible, and grow at 48° F until plants are 2 to 3 inches high. All bulbs should be well rooted before being brought into greenhouse. 48° F is a good rooting temperature. If bulbs have heaved up in the flats or pots by their rapid rooting, they should be pressed down again with careful handling.
5. In the greenhouse grow cool, never above 60° F early, or 65° F for last two weeks of growth. This is maximum for day temperatures. Southern growers should have cooler sheds to prevent warm fall days from injuring stock. Ventilate on warm days.
6. Do not allow flats or pots to dry out.
7. Do not plant Iris too close on benches, 3 inches apart in 4 inch rows is about right, or 3½" x 3½" in flats.
8. Use preventive spray or dust on Tulips against Botrytis. 5% dust or spray of Fermate, or 50% Limestone and sulphur.
9. Watch out for bright days raising house temperatures above maximum allowed. Nothing will spoil them faster than temperatures above 70° F.
10. Get to know varieties.
11. Buy from a reliable source where honest size of bulbs, and true varieties can be expected on delivery.
12. Overhead heat is best for bulb culture as pipes under the bench often heat the plants more than the house thermometer indicates. Where pipes under the bench are used it is wise to string a roll of wrapping paper about a foot high above the edge of each side of the bench. This prevents warm air from circulating up around the side of the bench and drying and heating flats along the edges.
13. We have found dusting bulbs with Spergon is a good preventive of rooting troubles in Tulip culture, particularly in late field plantings. Tersan or Arasan dusting for Narcissus.
14. Check your thermometers for accuracy. It is not unusual to find thermometers 5 degrees off and this could ruin a bulb crop run at 65° F close to maximum.
15. Iris wanted for late forcing do not have to be planted immediately upon arrival, but can be planted later in the season, even as late as December 15th. These Bulbs should be stored in trays in a fairly warm and dry place about 70°.

Lily Forcing

CREOLES OR FLORIDI

Because the Creole types are grown in the south and have an earlier harvesting season, they are more rapidly grown for early cut flower trade than the western lilies. They have size and substance and can be grown on long heavy stems, and have been in good demand in that work. Naturally by storage treatment they may be held for later planting. They are better grown at a cooler temperature, starting them 50°, then later raising to 55°, which suits them well. They require a little more care during the early stages, as they do not make a strong root growth at the base. Give Creoles plenty of space and light. Lack of light has been found one of the causes of bud blasting and splitting in recent experiments with Creole Lilies.

Blooming time—90-100 days.

CROFT LILY CULTURE FOR FORCING

The Croft lily bulbs which we ship are precooled and should be planted immediately on arrival, with exception of some Croft Lilies we ship to the coastal areas of Washington, Oregon, and California where some growers pot them for frame growing immediately after the bulbs have been harvested. Where bulbs are not precooled they require about 180 days of growing to bloom them for Easter. Pot in a well drained soil mixture and grow at 60° temperature nights and days for blooming approximately in 125 days.

It is usually easier, and cheaper, to hold a plant back by running temperatures cool the last two weeks than run the risk and expense of having to use high temperatures and the spoilage involved due to late timing.

Lilies keep well in cool temperatures as long as 2 to 3 weeks. By growing them at a steady 60 degrees they will progress rapidly without loss of buds.

After receiving bulbs figure the number of days you have from potting to the time you wish to sell. You will find more than enough time to make Easter.

Buds should be about an inch long 6 weeks before Easter. If your plants show longer buds than this 6 weeks before you wish to sell them, drop the temperature slowly, as a sudden change might check them, and make them very slow to respond to temperature later. If the buds are not quite visible raise the temperature to between 60 and 75 degrees day and night. At 75 degrees they will come into bloom from the bud stage being just visible in about 4 weeks. One can judge from week to week the progress of growth, and consequently how to regulate the temperatures during the last few weeks. Flower buds should be turned down or turning down at least 2 weeks before Easter. Gradual changes are the best and safest way to handle the crop. Water more frequently if temperatures are raised and never grow at above 75 degrees during the days. Higher temperatures than this only makes the plant respire faster, stretch more but bloom no sooner. Often higher temperatures cause loss of foliage and the blasting of buds.

Any nematode in bulbs results in late emergence. It would be a wise precaution to separate late emerging plants from the others until time shows them normal. Do not syringe Croft Lilies early. Syringing is only necessary to prevent dehydration under extremely hot forcing conditions.

HOW TO GROW SHORT AND EVEN LILIES

1. Bright houses are of great help. Every florist knows that shading will stretch plants. Therefore, have clean glass and give the plants enough room as they develop. Crowding will shade and stretch plants so avoid crowding.

2. Use room temperature water when watering. We have found winter city water as low as 34 degrees coming from the hose. It shocks the plant and slows growth. This necessitates running the greenhouse temperature higher to keep the Lilies growing steadily. The high temperatures cause soft elongated growth.

3. Water wisely! Too much will promote soft tall growth, too little and bud blast will result.

4. Fertilize very lightly but often. 1 or 2 lbs. of 8-8-8 of soluble type in 100 gallons of water used in regular watering schedule once a week after plants are 3 or 4 inches high is a good program using well drained loose soil

5. Plant the bulbs exactly the same in all pots. 1 inch from the bottom of a 5 or 6 inch pot is a good depth. Easter Lilies are stem rooters and feeders particularly. Fill each pot to the same height with dirt. Thus later when the pot is watered and filled say with ¾" of water each plant will be receiving the same quantity of water.

6. How Lilies are treated in cold storage, and where they were originally grown influence the type of plant too, but Vaughan's treatment and sources of our stock can be grown by expert growers at any height from 8 inches to 3 feet. We have followed the same stocks to different greenhouses year after year and observed constant height variations depending on the grower.

ACE LILIES

The improved Croft Lily type "Ace" can stand more rapid temperature changes than Croft. It is very resistant to Botrytis and free of scale tip rot. It requires 20% less bench space due to shorter and more upright foliage. It blooms very freely due to the large amount of chemical substance in its high crown bulb. Our pre-cooling is done to make this Lily bloom in 130 days grown at 64 degrees nights after 30 days at 60 degrees. Sprouts will emerge 2-3 weeks later than Croft planted on same date, but 2 weeks will be gained back from sprout to bloom.

ESTATE LILIES

Croft size flower of good substance. It grows taller and takes 10 days longer to bloom. It is a free bloomer and a fine Lily to grow for late spring and summer cut flowers or when tall pot plants are desired. The bulb is an exceptionally healthy one generally free of scale tip rot.

Imported Hyacinths FROM BEST DUTCH FIELDS

All January and February forcing should take place in darkness until the sprouts reach about 4 inches growth. Later in season the sprouts will have reached this height outside or in the bulb cellar and can therefore be placed directly on the bench in the greenhouse. If you wish Hyacinths for Easter or later keep bulbs in a warm dry place and plant in December to the middle of January.

Never bring in Hyacinths until the buds are visible and Bulbs are well rooted.

Narcissi—American, French and Holland Grown

Our Holland-grown bulbs will come from fields that have been inspected by Hollands best pathologists for diseases and rots. All cases are put on well ventilated ships so that you will receive the bulbs in good condition.

Our American-grown bulbs are grown in Oregon, and Washington where narcissi bulbs grow best. The most modern implements are used so that bruising and disease are reduced to minimum. After digging, our bulbs are stored in temperatures that have been found most satisfactory by eminent English and Dutch experimenters. This temperature treatment hastens the flowering period and keeps the bulbs firm.

For very early forcing we recommend American grown Pre-cooled King Alfred. However orders for these must reach us by August 10th.

Vaughan's American Grown Lily Bulbs

From best inspected sources and prepared with the correct storage until shipped to give you best results at Easter Time.

Clark Slocum originator of The Ace Lily shown with his mother block from which all his planting stock originates. These bulbs are sold only by Vaughan's Seed Co.

ACE LILIES

The best "Croft" type of Lily grown! Grow 30 days at 60 degrees then 64 degrees for blooms in 130 days.

1. Ace takes less bench space, as its foliage is more up-right.
2. Ace is grown for Vaughan's by growers who grade generously on sizes. Priced at slightly higher than Croft.
3. Ace is a high crowned bulb with tight fitting scales, that will give you more flowers per size planted.
4. Ace is selected for high bud count by Mother block system of stock bulblets.
5. Ace is botrytis disease free.
6. Ace is very resistant to scale tip rot.
7. Ace has a very strong stem not requiring staking.
8. With an exclusive better product you will be in better marketing position.
9. When properly cold stored it emerges two weeks later than regular Croft but blooms at the same time.

Nine "Ace" reasons will be enough to win Easter business from the toughest competition. Grow "Ace" Lilies.

Ace flowers are about 1 inch shorter than Croft but open slightly wider. Foliage is darker green, shorter and more upright in growth.

It is another fine introduction by Vaughan's Seed Company Pioneers in proper storing of all types of Lilies, Narcissus, Tulips and Iris. We deliver consistently good quality at reasonable prices. Car lot purchases of all bulbs enable us to deliver in less time with much less risk of heating. Our volume warrants extra service to you of experts inspecting fields, packing and supervising and shipping. Do not gamble on unknown sources when it takes four or five good crops to make up for one poor one.

CROFT LILIES WEST COAST GROWN

Our bulbs will be generously graded with a double check of a minimum weight requirement per case. All Vaughan's bulbs will be from fields inspected by us twice during the growing season. Packing is done with our supervision and per our specifications.

For later blooming cut Lilies. Our bulbs will be stored under the latest temperature information that "Holds that high bud count." This involves additional work and expense for us, but we consider it an important part of our service to supply the highest quality stock possible.

Pot Lilies 1 inch from the bottom of pot so that there is plenty of soil above the bulb for the stem or feeding roots. Be sure the soil level is the same height in all pots about 3/4 inch from top so that when pots are watered all pots receive about the same quantity. Close attention to the above encourages even growth of plants and less shifting later.

We recommend feeding plants every week after 2 inches high with a balanced fertilizer high in nitrogen particularly to avoid "leaf spot". An 8-8-8 of soluble type of 2 lbs. in 100 gallons of water is safe to water in the pots once a week. Water with the solution of fertilizer at night so there is less danger of temperature going up and causing burning and be sure the plants are not suffering from lack of water or dehydration before fertilizer and water solution is applied. This also prevents dehydration due to concentration of salts outside of roots.

Our bulbs will be cooled properly for easy forcing in 130 days at 60 degrees with maximum bud count.

Miscellaneous Bulbs

WHITE CALLAS

Giant Hybrid Amaryllis

One of the finest strains of Amaryllis we have ever seen. Flowers are immense, composed of broad, well-rounded, overlapping petals; of the most perfect form, ranging in color from pure white grounds with varied markings of rose, red and crimson to the richest self colors as scarlet, crimson, bright red, cherry and almost maroon.

Bulbs 2 1/4 inches and more are sure bloomers.

Amaryllis Bulbs are good sellers in Florist Shops.

CHIONODOXA (Glory of the Snow)

These are among the most beautiful of our spring-flowering bulbs, coming into bloom soon after the snow is gone. Grows well in any good garden soil, and when once planted requires no further care. Looks best when planted in lines or clumps.

Lucillae. Flowers of a brilliant sky-blue color with white center. Per 100, \$2.20; per 1,000 \$12.00.

Sardensis. Deep blue. Per 100, \$2.20; per 1,000, \$12.00.

CALOCHORTUS or MARIPOSA TULIP

These famous California flowers resemble a tulip in shape, and are of many colors, shades and markings. Try a few in a cool house. Mixed, per 100, \$4.75; per 1,000, \$37.50.

WHITE CALLA

(Aethiopica) Ready in September

Callas being natives of swampy regions grow to best advantage where there is an abundance of moisture, and are therefore very difficult to handle in the curing. Some growers practice **premature cutting off the tops**, expose bulbs to the sun, in order to make early shipment.

Our stock is **thoroughly cured in the ground and dried carefully** before they are packed. This means **later delivery** but better results can be obtained from such bulbs.

We caution forcers of Callas to water this stock sparingly after planting because Calla bulbs store up considerable moisture.

IXIA

These easily grown, quick selling bulbs are rapidly becoming popular as cut flowers. Planted from September to early December in pots or bench, they produce beautiful, long stem flowers during late February and early March. Main requisites for successful growing are careful watering at beginning of growth, and a cool temperature (Carnation temperature, or cooler).

EVERY customer who enters your store is a prospect for a sale of Paper White narcissus bulbs. Here is a carefully designed, thoroughly tested method of displaying and selling them at a minimum of trouble and expense and the maximum of profit.

Florists cannot afford to sell inferior bulbs. Vaughan's bulbs of 13-14 ctm. circumference and up are of flowering size and highest quality. Three bulbs are enclosed in an illustrated bag which prevents picking over of the individual bulbs, injurious handling and resultant waste. Every bulb we ship you can be sold at a profit.

Our Paper White display box, specially reinforced, decorated in black, red and green, will harmonize with your store display and sell its contents. It occupies 10 by 20 inches space, and one filling provides \$40 to \$48 sales at 100% profit. Why let chain stores get sales which should be yours?

"SNAPS" for Greenhouse Forcing

ANTIRRHINUM Christmas Cheer, Ethel, Better Times

Snapdragon being one of the leading Florist Greenhouse crops, we have followed very closely the development of the Winter Flowering or Forcing type and offer the following approved varieties.

Varieties followed by (X) are sold in 1/2 trade pkts. at 60c each. If you are not growing Hybrid Snapdragons, suggest you try them. Due to their vigor these Early Hybrids give maximum production as a Winter Crop.

NEW HYBRIDS FOR 1951

- Barbara** (Yoder). The large bronze florets, with pink throat and bright bronze lips, are borne on long spikes. Vigorous grower. The earliest of the bronze group.
 - Patricia** (Yoder). The medium sized florets of rich yellow with full deep yellow lower lip are borne on long spikes. Vigorous grower; fast taking the lead as the best yellow for winter blooming and cloth house culture.
 - Priscilla Ann** (Yoder). Long graceful spikes with large velvety-crimson florets. At times a faint touch of yellow is noted on the lip. The earliest crimson.
- Each of the above: 1/2 trade pkt., \$1.75; trade pkt., \$3.00.

Calceolaria Hybrid

These Make Wonderful Plants for Easter or Mother's Day

For Calceolarias, use a mixture of loam, leafmold and sharp sand. This mixture is suitable both for the seed pans and the pots into which the seedlings, when ready, should be planted. Perfect drainage is important. Calceolaria seed being very fine the seeding should be done with great care and it is suggested that one use a sheet of white paper on which a tablespoon of white sand is distributed. Then shake the seed on top of this sand and mix thoroughly. Sprinkle this mixture on the soil of the seed pan, dusting surface with a little fine sand, cover with a sheet of glass and place in the shade. For moisture, immerse the pans in water. As the seedlings come up lift them carefully when quite small and prick them off into a flat allowing two inches square for each plant. It is important that the leaves of one plant should never be allowed to overlap those of another or decay will probably result. When established in pots shift them into the larger size. At the last shift give them some manure water, not too strong, about once a week.

Hybrida Grandiflora Triumph Strain. A truly outstanding strain. Bright shades of yellow, orange, red and rose; the flowers are large and mostly tigered or spotted. This strain produces bushy, shapely plants with clean foliage. 1/64 oz., \$2.75 1.25

Suggestions For Sowing Seeds During the Summer Months

During the hot months of July and August fine seeds such as Calceolaria, Cineraria, Snapdragon, and finer perennial seeds, etc. should be sown in flats (as usual) and the flats placed in a cool basement until the seedlings sprout, then taken to greenhouse and some cheese cloth placed over them until the seedlings are of sufficient strength to have it removed.

DELPHINIUM PACIFIC GIANT HYBRIDS

Delphinium

PACIFIC GIANT (Vetterle and Reinelt)

This strain produces plants that are 60 to 65 per cent mildew resistant. The flowers are of immense size, tightly set on straight stems that are strong and whippy. The flowers do not shatter and represent a truly outstanding addition to the cut flower market.

GLOXINIA HYBRIDA

LARKSPUR SUPREME

Annual Larkspur

To get satisfactory germination from Larkspurs in the hot weather, it is necessary to chill the seeds in an ice box for several days before sowing. May be sown outside late in Fall just before ground freezes up.

NEW LARKSPURS TAKE THE LEAD

Supreme. An entirely new strain of Giant Imperial or base branching Larkspur, in colors greatly improved over others. Plants have an ideal upright habit, with spikes on which large fully double flowers with broad petals are closely spaced.

Dark Blue Supreme. A fine rich violet purple, clearer and brighter than offered before. Outstanding improvement in the length of flower spike. Fully double flowers, closely set on stems which grow 5 ft. or more.

Lilac Supreme. A pleasing clear lilac.

Pink Supreme. A most desirable florist color. A clear rose pink, deeper in color than the well-known Los Angeles Improved. Tall growing plant with exceptionally long heavy main spike closely packed with fully double flowers with very wide petals. Under artificial light this color comes to life.

Rose Supreme. Clearer and deeper rose than the popular Stock Flowered Rosamond.

Salmon Supreme. True salmon, much stronger than other salmon pinks.

White Supreme. A true white, without a trace of pink.

Each of the above, Trade pkt., 35c; 1/2 oz., \$1.00; oz., \$1.80; 1/4 lb., \$6.00; Lb., \$18.00.

Supreme Mixed. A formula-blend of the above colors to which has been added sorts not yet introduced.

Trade pkt., 35c; 1/2 oz., \$1.00; oz., \$1.80; 1/4 lb., \$6.00; lb., \$18.00.

Regal Rose. This new strain retains the compact basal branching habit of the Giant Imperials but has a tremendously long spike of well-spaced florets. Plants are extremely vigorous and quite early. A rich Florist's rose color. Trade pkt., 35c; 1/2 oz., \$1.00; oz., \$1.80; 1/4 lb., \$6.00; lb., \$18.00.

SUPER MAJESTIC—5 Ft.

Long tapering laterals branch from base of each plant and grow close to main stem, vigorous growth and abundance of flowers.

Deep Salmon Pink. Lavender. Rose Pink. White. Super Majestic Mixed.

Each of the above, Trade pkt., 25c; 1/4 oz., 40c; 1/2 oz., 65c; oz., \$1.10; 1/4 lb., \$3.60; lb., \$11.00.

GIANT DOUBLE IMPERIAL—4 ft.

Base Branching Type

This type is the most desirable for outdoor growing. An annual Larkspur of upright growth, branching from the base of plant, producing more and longer flower stems for cutting.

Kalanchoes

Winter flowering. Excellent for pot culture and cutting

Alfred Graesser. A strong hybrid with very free-flowering habit. Rich scarlet-red. Trade pkt. Oz. \$1.75

Brilliant Star. Makes a fine pot plant producing flowers 3 times the size of the common varieties and of a brighter fiery red color. The attractive foliage is restricted to the base of the plant, permitting the development of clean stems about 5 inches long which are suitable for cutting, especially if benched. 1/128 oz., \$3.00; 1/4 oz., \$6.50; 800 seeds 1.50

Ernst Thiede. A sport from Kalanchoe Blossfeldiana Selecta. Very dwarf, compact growth. Free-flowering, glowing red. 1.25

"Flame". The vivid fiery red color of this Kalanchoe is unsurpassed. The flower heads are borne on wiry stems with up to 200 individual flowers. 500 seeds 1.00

Tom Thumb. A dwarf variation of the popular K. Blossfeldiana, with the same color. The general habit is more dwarf and the very short-flowering stems form just beyond the foliage and the flowers actually envelop the entire plant. 1/4 oz., \$5.00; 1/2 oz., \$9.00; 1000 seeds 1.25

Yellow Darling. (New). Similar in habit to Type Thiede, growing 5 to 7 inches high. Flowers are a strong lemon-yellow of outstanding brightness. The color, together with the shining green leaves, make it a perfect plant for flower arrangements in combination with the dwarf red Kalanchoes, Primula Malacoides or Saintpaulia. 500 seeds 1.25

Globulifera Var. *Coccinea* (Blossfeldiana). 12 inches. Bright scarlet flowers. Very choice pot plant. 3000 seeds, \$1.10; 1500 seeds. .60

Lilies

Seeds sown in October or November should be transplanted into 2 1/2 inch pots or bands 3 or 4 months after sowing. Carry along until August when they should be planted in the bench 6x8 inches apart or grown in 4 or 5 inch pot. These will grow into plants carrying 2 or 3 flowers the following Spring.

If only buds are cut at this time, letting the foliage dry down by gradually withholding water, and then placing bulbs in cold storage at 32 to 40 degrees and then potting; the next Spring a much higher bud count can be expected.

Longiflorum Praecox (White Queen). Produces blooms of the well known Erabu type in from 12 to 15 months after sowing. Long trumpet flowers of clear white. 1/2 trade pkts., 60c \$1.00

Lupinus

Free-flowering, easily grown annuals, with long, graceful spikes of rich and various colored pea-shaped flowers; valuable for cutting to follow "mums" or sweet peas as a "catch crop." Sow 3 or 4 seeds in a 3 or 4 in. pot. Keep in cold frame until late October or November. Transplant into a ground bed and grow slowly in cool temperature. Space 10x12 inches, water well after transplanting and then keep on dry side until plants are established.

Hartwegii Giants or King Lupinus. This improved giant strain is over a foot taller than the ordinary strain, reaching a height of 3 or 4 feet. There are five or six long basal branched spikes to each plant, bearing closely placed giant blooms.

Vaughan's Giant Pansies

PANSY VAUGHAN'S SUPER SWISS GIANT MIXTURE

Pansies have long been a favorite with us. We introduced the Swiss Giants to American gardens and named and introduced the lovely Canadian variety, Maple Leaf, several years ago.

VAUGHAN'S SUPER SWISS GIANT MIXTURE

One of our leaders and represents the choicest strain of this popular and profitable flower. Combining the finest selections of several Pansy specialists, the perfect blending is further insured by the addition of separate colors that do not generally appear in the average mixture. Trade pkt., 75c; $\frac{1}{8}$ oz., \$1.80; $\frac{1}{4}$ oz., \$3.00; oz., \$10.00; $\frac{1}{4}$ lb., \$36.00.

VAUGHAN'S IMPROVED SWISS GIANT MIXTURE

The flowers of this strain are of enormous size, 3 inches and over in diameter. They are perfectly round with overlapping petals, borne on strong stalks well above the remarkably luxuriant foliage. Thick petals, of a rich velvety texture, give this strain of pansy the required substance so necessary to a perfect pansy.

The superb colors and color combinations—are their distinctive feature. Excellent for greenhouse culture. Trade pkt., 60c; $\frac{1}{8}$ oz., \$1.30; $\frac{1}{4}$ oz., \$2.25; oz., \$8.00; 4 oz., \$30.00.

Primula Malacoides (Baby Primrose)

Recent improvements in this Baby Primrose class have made it indispensable for Florist's use. Seed sown in June will flower for Christmas and September sown seed will produce nice plants for Easter and Mother's Day. Sow in sterile soil.

Erikssoni Varieties—Originator's Strain.

- Glory of Riverside Improved.** True rose-pink, a strong grower and without a doubt, the most valuable variety for all purposes.
 - Lavender New Baby Improved.** While some flowers are a lavender-pink, this variety does contain the most beautiful shades of lavender.
 - Lilac Beauty.** The color is a pure soft lilac, absolutely fixed. This is another fine color for making up artistic combinations.
 - Mrs. Eriksson of Riverside.** Large flowers of deep rose-red.
 - New Giant.** Large flowers of light salmon-rose borne on heavy stems. Late to bloom.
 - Peachblossom.** Deep peachblossom pink. Compact habit and an excellent keeper.
 - Red New Baby Improved.** Glowing red, large flowered. A heavy producer on long stems.
 - White Giant.** (Pure White). Large pure white flowers on strong stems; good for combinations.
- Each of the above, trade pkt., \$1.25.

Malacoides Special Mixed. A formula-blend composed of Erikssoni varieties. Trade pkt., \$1.25.

Stocks

Our Stocks are produced by the most careful growers and are equal to the best in the market.

Varieties preceded by star (★) are the most popular colors. A leaflet on "Methods of Selecting Double Flowered Stocks in the Seedling Stage," by Prof. S. L. Emsweller, will be included in all orders for Column Stocks seed.

GIANTS OF CALIFORNIA

This magnificent group comes very early, having the branching habit of the Bismarck, with mammoth flowers on longer stems. When planted close they make one long spike of mammoth florets closely packed around the stem.

Blood-Red "The Red Woods" Rose "Yosemite"
 Blue "Pacific" Rose Carmine "Sequoia"
 Chamois "Santa Barbara" Velvety Violet "Mojave"
 Lavender "Tahoe" White "Santa Maria"

Illusion. Scarlet red.
 ★Lilac Lavender. Same as Silvery Lilac.
Pink Giant. (New). A rich rose pink almost identical in color to Rose Pink No. 14, except for the slightly brighter center of the flower. The large florets are closely set on long stems.
Pink (No. 11). Light rose-pink, exact shade of Bismarck Rose.
Purple Heart. Long stemmed, bright violet purple.
 ★Rose Pink (No. 14). A deep selection from No. 11; a rose-pink, not a deep heavy rose. Good market color. Long-stemmed, about ten days later than No. 11.

Ruby. Rich crimson red.
 ★Silvery Lilac. Lilac lavender.
 ★Supreme No. 22. Rich silvery rose with extra long stems and fine heavy spike.
 ★Vaughan White No. 1. A companion to Silvery Lilac in height and bloom-date.
White Giant. (New). Long stemmed pure white without trace of green. The large florets are closely set on strong stems.
 ★White Improved No. 16. Semi-tall. Early pure white, with large florets and compact spike.
 ★Yellow Wonder. Best yellow.

Vaughan's Peonies

5 of a Kind at the 10 Rate—25 of a Kind at the 100 Rate

Prices are F. O. B. Western Springs, Ill., packing charges to be added at cost.

WE HAVE an exceptionally large stock of our own growing. Strictly true to name, all in strong divisions, with from 3 to 5 eyes each.

The figures preceding the varieties are the rating given to them by the American Peony Society

Peonies in established plantings need to be fed each Spring. A top-dressing of a balanced plant food well worked in will do wonders, but it should be applied early.

SYRINGA French Hybrid Lilac

Ornamental and Flowering Shrubs

Our shrubs are nursery-grown and are transplanted every two or three years. They are nice, shapely bushes with plenty of good fibrous roots, and are such plants as are in demand by the first class retail trade. They should not be compared to stock that is never moved from the cutting or seeding beds until sold.

Our Nursery is located at Western Springs, 15 miles west of Chicago on the C. B. & Q. R. R., two blocks south of 47th Street, on Wolf Road. Visitors are invited to inspect our stock at any time. We have a choice lot of specimens such as are not usually seen. Our customers will be pleased with the class of stock we send them.

Shipping Directions: All stock is sold F.O.B. Western Springs. Packing charges to be added on all orders for shrubs, dormant roses, fruits, trees, evergreens, and vines, at cost. Always give full and explicit shipping directions, as our responsibility ends on delivery to the express or freight office in good condition. All trees, shrubs and plants shipped subject to customer assuming risk regarding their own State Nursery Inspection Regulations. Certificate furnished with each shipment.

Where personal selection of stock is made at our Nursery we charge according to its value.

Warning: Prices on all nursery stock subject to change without notice. 5 plants of one kind supplied at 10 rate; 30 plants of one kind supplied at 100 rate.

CALADIUMS—Vaughan's Special Fancy-Leaved

CALADIUMS are easily grown but should not be put in a Carnation temperature. Start the bulbs in flats, turning them upside down, since this is a crown-rooting bulb and the roots come out around the top (center) eye. This direct contact with the growing medium produces roots more quickly than the opposite method. Use a mixture of one part leaf-mold, one part good garden loam, and one part peat moss or other coarse neutral material, throwing in a small amount of coarse charcoal or other rubble for drainage. Press the bulb halfway into the soil and place the flats under a bench. The flats can also be placed on top of the flows, but if this is done, they should be shaded. The temperature should be 80 to 85 degrees or higher, as the higher the temperature, the better starting results you will have. Be careful that the flats do not dry out if placed either on the flows or returns. Water sparingly until the bulbs begin to sprout and have roots 4 to 6 inches long. When the sprouts begin to show, place the bulbs in 5 or 6-inch pots, using a good rich leaf-mold. Water copiously when in full growth and use weak liquid manure once weekly if possible.

DISEASE-FREE CARNATION ROOTED CUTTINGS

Rooted cuttings of 14 varieties of Carnations, taken from isolated Mother Stocks grown from seed, and maintained under every protection from disease that modern science affords, will be available in early 1952

So far as human agency can insure, these cuttings will come to you free from any virus, bacterial or fungous disease; and they will give the careful grower a clean start. By continuing the programme of protection, they should be made to yield superior results.

This is an important step forward toward the goal of eliminating the diseases that plague carnation growers, and if results prove its effectiveness, it offers a solution of that problem, but it should be understood that disease-free are not necessarily disease-resistant, or immune, and should not be subjected to unsanitary treatment or handling. They require the same precautionary methods which are necessary in handling ordinary commercial stocks or varieties

Our price schedule for 1952 is as follows:	Per 100
50 of a variety	\$18.00
100-250	17.10
300-450	16.20
500-950	15.30
1000-2450	14.40
2500 Up	13.50

1. Apollo (No. 293). Should become the leading salmon-pink. Grows well everywhere, a good summer flower, larger than Netta
2. Aphrodite (No. 66). The clear light pink retailers demand; outer petals bleach slightly late spring and early fall. Needs plenty of light to do its best.
3. Diana (No. 362). A high producing light pink similar to the Fischer varieties.
4. Venus (No. 366). A show variety with superlative salmon-pink flowers on long stems. Not too heavy a producer.
5. Jupiter (No. 417). A large white that will compete with Northland. Exceptionally good in the Middle West
6. Aurora (No. 684). A large white, best in late spring and early fall. Production somewhat limited.
7. Adonis (No. 33). A good winter production white.
8. Midas (No. 443). A substitute for Miller's yellow with excellent production
9. Minerva (No. 262). Unusual deep scarlet-pink. May fade with high light intensity, but does so uniformly. Heavy break-back. Good keeper.
10. Ceres (No. 51). Fair size December to May; small the rest of the year. Beautiful King Cardinal color and really high production. Early, with a heavy comeback.
11. Neptune (No. 225). A scarlet like Wm. Sim. Free breaker, fine stretch; a very satisfactory variety
12. Vulcan (No. 688). A fine crimson or maroon flower. Excellent keeper, good comeback. Should supersede all others in this class.
13. Saturn (No. 317). Novelty warm bronze variegated; color striking under artificial light.
14. Orion (No. 518). Color like Glowing Ember; excellent grower and producer

No. 4 Jardier Bulb Box

THE JARDIER BULB BOX

Here is the final solution to bulb and plant "box idea" and its many possibilities. The Jardier box is absolutely waterproof. Place the soil and plants directly into the Jardier. It is the least expensive and most practical method of carrying out the beautiful box idea. Jardier Boxes are self-aerating—same as Jardier Vases—stimulating plant growth.

Be First With This New Crab Grass Killer

CRAB-NOT CONTAINS POTASSIUM CYANATE

FOR SUMMER AND AUTUMN SALES

Since 2,4D made it easy to kill dandelions with a spray, crab grass has become the No. 1 Weed in lawns throughout this country.

Potassium Cyanate (PC for short) is nonpoisonous, an entirely distinct product from the deadly potassium cyanide. It is safe to use where pets and children play.

Two formulae of Crab-Not are offered, Standard, the processed form of PC alone; Special, a combination of PC and 2,4D. The special formula kills dandelions, chickweed and other lawn weeds together with crab grass in the same operation.

Now! A New Kind of Lawn from All-New Grasses

Life-size Closeup Taken in July of Merion Blue Grass Turf Cut with Mower, Set 3/4-in. Note Heavy Stand, Healthy Texture and Vigorous Weedless Growth.

RESEARCH on lawn problems conducted for many years is made available to amateurs in Vaughan's Merion Blue Grass Formula, which gives promise of revolutionizing lawn making practice. Traditional rules for lawn mixtures are discarded, and the grasses used in such mixtures for the past century passed-by, to produce lawn seed which has all the virtues of the old-time blends, without the faults which have often made the task of maintaining lawn beauty throughout the garden season difficult.

MERION BLUE GRASS FORMULA — 100% Perennial Grasses

Contains: Merion Blue Grass, Illahee Creeping Fescue, Highland Bent. 1 lb., \$1.75; 5 lbs., \$1.70 per lb.; 10 lbs., \$1.65 per lb.; 50 lbs., \$1.62 per lb.; 100 lbs., \$1.60 per lb. Retail for \$2.75.

Produces thicker turf, stays greener all summer and stands closest mowing. 1 lb. covers 750 sq. ft., 3 times as much as standard blue grass mixtures, thus being no more expensive to sow an equal area

Merion Blue Grass, propagated from a single plant selection, which has demonstrated in trials throughout the country ability to stay green all summer, stand close mowing, and resist leaf spot and other diseases. Because its growth is more stocky and spreading than standard blue grass, it covers more ground, and less seed is required for a given area. We regard it the most important lawn grass introduction in the last century.

Illlahee Fescue, an improved strain of creeping red fescue, stronger growing and more resistant to disease. It thickens the turf, does well on sandy soils and in shade.

Highland Bent, dry land or upland bent, more drought and disease resistant than most bents and not requiring the care of creeping bent, it spreads underground and makes a thick turf, helping keep down weeds and spreading quickly to cover bare spots.

MERION BLUE GRASS

For those desiring straight Merion Blue Grass we can offer up to a maximum of 100 lbs. per customer due to the limited quantity. One lb. will sow 750 sq. ft. 1 lb., \$3.25 per lb.; 5 lbs., \$3.20 per lb.; 10 lbs., \$3.15 per lb.; 50 lbs., \$3.10 per lb.; 100 lbs., \$3.00 per lb. Retail for \$4.50 per lb.
